

Project Plan & Task Breakdown

eCommerce — Winter 2026
Teacher: Tiago Bortoletto Vaz

Deliverable	2 of 3
Submission	Single PDF document
Weight	2 % of the final grade

1. Overview

This is the second of three deliverables for your LIA. In Deliverable 1, you defined what you will build. In this deliverable, you will plan how you will build it.

The focus is on three things: reflecting on the work already accomplished, designing the pages of your application, and breaking the remaining work into concrete tasks with clear ownership.

2. Required Deliverables

Your PDF submission must contain all of the following sections, in the order listed.

2.1 Team Journal

Write a short journal entry (half a page to one page) that covers the following:

- What has each team member contributed so far? Briefly describe each person's work since the start of the project.
- How is the team meeting? Describe your current or intended meeting format (in-person, video call, messaging, etc.) and approximate frequency.
- Who is leading each area of the project? Assign a point person for each major area: front-end, back-end, database setup, deployment, and any other area relevant to your project.

Note: This section is about honest reflection, not length. A few clear sentences per point are enough.

2.2 Web Application Design

Provide a simple wireframe or mockup showing the main page of your application. This can be hand-drawn (scanned) or digital (draw.io, Figma, etc). Make it simple, but really close to what will be your final product. Label the key elements on the page (navigation, forms, content areas, buttons). You do not need pixel-perfect designs. The goal is to show that your team has thought through the user experience before writing code.

2.3 Task Breakdown

List all remaining tasks needed to complete your project. For each task, provide:

- A short task name and a one- or two-sentence description of what it involves.
- The team member responsible for it.
- An estimated completion date.

Group tasks into logical phases. A reasonable grouping might be:

Phase	Examples
Database	Schema creation, seed data, migrations
Back-end	Routes, controllers, models, services, authentication
Front-end	Templates, layouts, CSS, AJAX search
Integration	i18n, file uploads, 2FA, flash messages
Testing	Manual testing, bug fixes, cross-browser checks
Deployment	Server setup, domain, deployment workflow

You may present this as a table, a simple Gantt chart, or a list — whatever you prefer.

2.4 Tools & Technologies

Include a brief note confirming the tools and technologies your team will use. If anything has changed since Deliverable 1, mention it here. Also, in Deliverable 1 you mentioned features. Some of these features will need specific libraries. Now you should list exactly the libraries you'll be using to achieve your original goals.

3. Submission Instructions

- Submit a single PDF file. No Word documents, ZIP archives, or external links to the document itself.
- Only the new team lead submits on behalf of the team.
- Late submissions are subject to the course's standard late-penalty policy.

4. Academic Integrity

All submitted work must be the original work of the team. You may use diagramming tools, references, and online resources, but may not copy and paste from external entities. Suspected cases of academic dishonesty will be handled in accordance with Vanier's academic integrity policy. Please remind our conversation about using chatbots to write text for you. I'll be more strict this time. LLM-style, empty & generic sentences won't be graded.
